MEDISUN
profi s.r.o.

The private **PRO-NURSE®** brand of Czech natural cosmetics was created in 2014. Since then, we've put all our profits back into research and developing new types of cosmetic products which the Czech and international market demands. **PRO-NURSE®** cosmetics are designed for adults and children from 3 years of age. Since 2018 it has been marketed under the registered brand names **PRO-NURSE®** and **PRO-NURSE™**.

The Golden Edition of the **PRO-NURSE® HEALTH** professional cosmetic line is our third and marks a very important chapter of the **PRO-NURSE®** natural cosmetics. As the name suggests, it is designed primarily for the health, treatment, and care of very significantly damaged skin, skin defects, and difficult to heal wounds. It is also ideal for the negative consequences of sports, such as overloaded muscles and muscle pain.

The products of the **PRO-NURSE® HEALTH** cosmetic line are part of the new "green wave" in medical cosmetics. The best natural formulation of the basic line, which already contains extracts from medicinal cannabis, led our company to add cannabidiol (CBD) as a bonus to these products. CBD is currently a frequently discussed substance that is successfully helping address many of the problems of the human body which have proven difficult to solve by classical medicine (due to environmental impacts) or whose treatment is very lengthy and expensive. Our efforts are based on the history and nature of using the entire cannabis sativa plant to eliminate many such problems and civilizational manifestations of skin defects. CBD has already produced positive results in the professional sphere of our healthcare.

We are not the first to produce cosmetics with CBD, but we're certainly not the last. We pay attention to skincare in its full complexity, however, and we draw upon clinical studies. We

have therefore started off from very good results where "mere" hemp oil helped us.

Cannabidiol belongs to a group of substances called cannabinoids which are present in nature only in hemp plants. CBD is the second most important of these substances, after THC. Chemically, CBD and THC are closely related, but CBD is not hallucinogenic like THC; this is important to older people in particular, who fear jeopardizing their motor skills and clear perception of the environment. This is why our cosmetics contain no THC and are by no means hallucinogenic. They have no adverse effects on the user's consciousness. CBD significantly slows down cell aging and has many demonstrable benefits. In addition to treating skin defects, CBD also treats pain. These cosmetics are also suitable for eliminating muscle fatigue, tension, joint pain, and many other negative consequences of recreational sports.

There is much talk and discussion about CBD, but we rely on actual cases where we were able to alleviate or completely eliminate negative effects on the skin. We have plenty of knowledge gained from practice in the supportive treatment of grade 1 and 2 bedsores (open wounds, grade 3, should always be consulted with an expert for treatment) where the treatment time was significantly shortened and where the addition of CBD in small doses (0.25 mg / 100 ml) resulted in successful treatment.

We are now promoting the **PRO-NURSE®** Zinc Ointment to the "Golden Edition" line as the first ointment on the market with a similar percentage of zinc oxide together with CBD. It supports the treatment of acne, eczema, stretch marks, and all possible open defects.

PRO-NURSE® Body Cream Cannabis is the second most popular cream in our line, but with the addition of CBD we now facilitate the use of the cream not only to support the treatment of skin problems, but also its use in sports for the treatment of muscle fatigue, overtraining, and stress. The cream helps to relax, soothe, and relieve pain.

We are pleased with how quickly the Golden Edition with CBD has found its users. We strongly believe in the all-natural composition and great effects of our cosmetics. You will find no poisons or controversial stabilizers in our products. Our main goal is to help people.

And once again, a word of advice in conclusion – don't decide based on the product's price, but its capabilities. Expensive does NOT mean good. Be friendly to your skin, and let our natural products help you!

PRO-NURSE® HEALTH BODY CREAM CANABIDIOL (CBD)

This body cream with gentle natural perfume is primarily designed for lubricating extremely stressed skin with a tendency towards eczema and psoriasis, skin defects, acne, and the like. It contains hemp oil (Cannabis Sativa Seed Oil) as well as 1 g of pure CBD and a balanced mixture of natural oils with a high content of vitamins and minerals. The basic composition of oils from sweet almonds, milk thistle, shea butter, soy, coconut, and herbs leaves a delicate natural scent. The cannabis (hemp) helps to soothe the symptoms of eczema and other negative manifestations of the skin for both adults and children from 3 years of age. Canabidiol is a 100% pure hemp extract. **It is not hallucinogenic and does not affect motor skills and operation of motor vehicles.** The cream cannot be overdosed. The cream contains **1.0 g of CBD**. Therefore, our product is very effective at treating all skin problems from small stretch marks to open decubitus ulcers (bedsores). It can also locally heal more serious forms of acne.

This body cream is the absolute best of all our creams; it is hypoallergenic and is designed for extremely stressed and defective skin. It can be used wherever *PRO-NURSE® HEALTH* Zinc Ointment with CBD has already done its work in drying wetting wounds. This cream will continue to provide successful care.

The cream is a mixture of natural substances and oils and is well tolerated by all skin types and

colours. It supplies the skin with nourishment and makes it soft and supple. It soaks in quickly and leaves no greasy or impermeable film after its application.

The dosage of the cream as a supportive treatment is 3 to 5 times a day to the affected areas.

The cream can also be used for relaxation and sports massages, because the content of CBD significantly relieves tension in muscles and tendons. It also eases muscle pain and skin tension. The products of the *PRO-NURSE® HEALTH* line can be always used for all-day care in hospitals and other facilities.

INGREDIENTS Aqua, Prunus Amygdalus Dulcis Oil, Silybum Marianum Oil, Butyrospermum Parkii Butter, Glycine Soya Oil, Cocos Nucifera Oil, Cera Alba, Cetyl Alcohol, Glycerol Monostearate, Polyglyceryl-3-Methylglucose Distearate, Squalane, **Cannabis Sativa Seed Oil, Canabidoil (CBD)**, Tocopherol, Rosmarinus Officinalis Leaf Oil, Lavandula Hybrida Oil, Thymus Vulgaris Flower/Leaf Oil, Parfum.

PROTECTIVE AND NATURE

PRO-NURSE® HEALTH ZINC OINTMENT CANABIDIOL (CBD)

Our basic and very successful ointment from the PRO-NURSE® line is enriched with canabidiol (CBD) and has thus been promoted to the Golden Edition of PRO-NURSE® HEALTH. The cannabidiol content significantly increases its healing effects.

The ointment is designed primarily for the treatment of severe and long-lasting skin defects. This healing ointment has a high content of canabidiol and zinc oxide and a balanced ratio of natural oils, making the ointment spread and absorb very well.

It soothes and protects irritated areas on the skin. Thanks to zinc oxide, it forms a protective complex in sensitive areas. Canabidiol is a 100% pure hemp extract. **It is not hallucinogenic and does not affect motor skills and operation of motor vehicles.** The ointment cannot be overdosed. The ointment contains **1.0 g of CBD per 100 ml**. Therefore, it is very effective at treating all skin problems from small stretch marks to open decubitus ulcers (bedsores). It can heal locally severe symptoms of acne and other wetting skin defects.

Always follow the rules of correct application! The ointment should be applied in a very fine and thin film depending on the size of the affected area. Alternatively, carefully apply the ointment around the edge of the affected area directly from the tube. In this case, however, the ointment must be used for one patient only. **DO NOT USE EXCESS OINTMENT ON THE SKIN!** A sign of quality application of the ointment is slightly filled skin pores through which the zinc oxide gets into the affected area. A thick layer (crust) will dry out the area and create the risk of cracking the newly formed upper layer of skin!

Apply the ointment 3 to 5 times a day depending on the extent of skin damage. Keep the wound hygienically clean! Before applying to an open wound, first squeeze about 1 to 2 cm of ointment from the tube and discard it. When applying on the face (on acne), apply it directly to the acne, ideally at night. However, we recommend that you first try the ointment in one place and watch the place until it heals. We base our treatment on practical experience. The high content of CBD has demonstrable positive results in a very short period of time.

Always ensure maximum cleanliness of hands and the treated area when applying the ointment. If you are not sure, apply the ointment to a sterile pad (purchased in a pharmacy) and apply to the wound.

The products of the PRO-NURSE® HEALTH line can be always used for all-day care in hospitals and other facilities.

INGREDIENTS Aqua, Silybum Marianum Oil, Zinc Oxide, Soya Oil, Prunus Amygdalus Dulcis Oil, Cetyl Alcohol, Glyceryl Stearate, Polyglyceryl-3 Methylglucose Distearate, Phenoxyethanol, Ethylhexylglycerin, **Canabidiol (CBD)**, Cetearyl Nonanoate, Xanthan Gum, Tocopherol, Parfum.
